-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 September 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Examiner's Comments

Although applicant has updated the specification to include the information for the parent application of this application, it is requested that applicant further update the specification as to the subsequent patent number of the parent application.

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 25-29 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 19-23 of prior U.S. Patent No. 6,737,163 B2. This is a double patenting rejection. Claims 25-29 of the instant application are the exact same as claims 19-23 of 6,737,163 B2.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1712

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 25-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Donnelly et al. (5,569,733). Donnelly et al. disclose a cured coating layer and method thereof comprising a material having the structure as claimed, a polyepoxide, and an acidic hydrogen-containing compound (Abstract and columns 5 and 6, Examples). Although Donnelly et al. do not specifically disclose wherein the polyepoxide has reacted with itself during cure, it appears this is inherently disclosed by Donnelly et al. because the materials of Donnelly et al. are the same as applicant's, and the same materials would have reacted in the same manner, absent evidence to the contrary.

Claims 25-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Zondler et al. (4,324,739). Zondler et al. disclose a cured coating layer and method thereof comprising a material having the structure as claimed (col.1, line 54-col.2, line 51), a polyepoxide, and an acidic hydrogen-containing compound (col.4, lines 41-66). Although Zondler et al. do not specifically disclose wherein the polyepoxide has reacted with itself during cure, it appears this is inherently disclosed by Zondler et al. because the materials of Zondler et al. are the same as applicant's, and the same materials would have reacted in the same manner, absent evidence to the contrary.
